SUMMARY

Software Engineer and Machine Learning Engineer with 5+ years of experience across startups, healthcare, banking, and mobile products. Experienced in building AI-powered applications, backend microservices, real-time conversational AI systems, and scalable ML pipelines using Python, Java, Spring Boot, React Native, Azure, Docker, and REST APIs.

EDUCATION

New York University

Master of Science in Computer Science

New York City, NY

Aug. 2026 – May 2028

University of Massachusetts Amherst

Bachelor of Science in Computer Science and Economics

Amherst, MA

Aug. 2022 – May 2026

EXPERIENCE

Machine Learning Engineer

Rightance Healthcare Inc

Jan. 2026 – June 2026

Boston, MA

- Developed deep learning classification and segmentation models on a dataset of 60K+ clinical images, improving diagnostic signal detection and reducing label noise by 22% through preprocessing and augmentation.
- Built automated training, validation, and evaluation pipelines tracking model performance using AUC, F1-score, and precision/recall metrics, improving inference efficiency by 30% while maintaining clinical-grade accuracy.
- Deployed containerized model inference services using Docker and REST APIs on Azure, enabling scalable integration with clinical imaging pipelines and real-time model inference.

AI Engineer Intern

Kapital Bank

May 2025 – Sept. 2025

Baku, Azerbaijan

- Built a real-time conversational banking assistant using GPT-4 via Azure OpenAI, integrating STT/TTS pipelines to support 100K+ banking users, reducing customer support response times by 20%.
- Designed WebSocket-based streaming pipelines for real-time STT/TTS processing, enabling low-latency conversational interaction with banking services.
- Implemented a Retrieval-Augmented Generation (RAG) architecture, retrieving contextual information from internal banking knowledge bases via REST APIs to generate accurate and compliant responses

Software Engineer Intern

Kapital Bank

May 2024 – Sept. 2024

Baku, Azerbaijan

- Designed and optimized 15+ Spring Boot microservices supporting 1M+ users, reducing service latency by 30%.
- Refactored Postgres schemas and query pipelines, improving transaction throughput across banking services
- Expanded CI/CD and testing pipelines, resolving 50+ production issues and improving reliability across systems.

TECHNICAL SKILLS

Languages: C/C++, Python, Java, Swift, JavaScript, TypeScript, C#, SQL, PostgreSQL, R

Frameworks: React.js, React Native, TensorFlow, PyTorch, scikit-learn, NumPy, Keras, Pandas, Spring Boot 3, Hibernate, Swagger UI, Azure, Kafka, Django, Flask, MongoDB, D3.js

ML/AI: Neural Networks, CNN/RNN, Transformers, Linear/Logistic Regression, Feature Engineering, Diffusion

Software Engineering: Git, Docker, REST, Agile, CI/CD, JUnit, PyTest, JWT, OAuth2, Kubernetes, Postman, AWS

PROJECTS

Wine AZZA Mobile App [\[Link\]](#)

- Engineered an app with seamless user authentication, streamlined navigation, and improved user accessibility.
- Built an intuitive React Native interface with Redux and integrated Firebase Firestore for real-time inventory sync, improving product discovery and reducing data delays by 40%.

RizzTheGrid [\[Link\]](#)

- Developed a platform that predicts hourly carbon intensity and renewable energy supply across 50+ U.S. regions using PyTorch-based forecasting models, reducing forecast error by 18% and processing 1M+ data points daily.
- Developed a RL scheduling engine for lower-carbon EV charging, cutting simulated fossil-fuel use by up to 4%.
